

RANDOLPH Y. LIANG

(571) 296-6786
randy8@vt.edu

EDUCATION

Blacksburg, VA	Virginia Tech	Aug 2014 – Present
<ul style="list-style-type: none">• B.S. in Computer Science, Minor in Mathematics, Expected Graduation: December 2018• GPA: 3.1, Dean's List Spring 2017• Coursework: Data Structures and Algorithms, Computer Systems, Data Structures and Software Design, Problem Solving in CS, Comparative Languages, Human-Computer Interaction, iOS Mobile Software Development, Intermediate Software Design, Cryptography, Multimedia/Hypertext & Information Access		

EMPLOYMENT

Software Engineer, Co-Op	Leidos, Inc.	May 2017 – Dec 2017
<ul style="list-style-type: none">• Learned branching strategies (Git), team-specific conventions, and agile development practices.• Spearheaded the development of a virtualized network to automatically setup/deploy VM nodes, developed a configuration server in C#, and integrated a multilingual XMPP Android chat client. Gained insight on networking and became familiar with Vagrant/Ruby, VMWare vCenter/vSphere, and Wireshark.• Developed a Python GUI using Tkinter that dumps user input into a JSON file and feeds it to Scrapy spiders to obtain OSM map data from online sources. Gained familiarity with Python front-end development, modular programming, and web-scraping.		

TECHNICAL EXPERIENCE

School Projects

- **Extensible Shell (C)** – process management for various UNIX commands, job control, and plugin support. Takes line-by-line input from the command line (e.g. moving a process to foreground) and supports piping and I/O redirection.
- **Memory Manager (Java)** – a memory management package for storing records consisting of songs/artists from a million-song database, relying on a hash table to store handles that point to the song/artist index in the memory manager. Implements a range query using a 2-3+ tree to retrieve songs written by specific artists.
- **Modified Quicksort (Java)** – implements a variant of quicksort for binary data, containing 4-byte records that consist of two 2-byte short integer values (sorting key, data value), organized by LRU replacement scheme
- **Recipe Finder (Ruby on Rails)** – created a Rails application using MVC classes that passes queries to the food2fork API and displays recipe information accordingly.

Personal Projects

- **randyliang.com (HTML/CSS, JavaScript)** – personal website with miscellaneous information with links to résumé, projects on GitHub, etc.
- **Lyric Bot (Python)** – Twitter bot that scrapes lyrics from the web and tweets them every 30 minutes.
- **Custom Chipotle Order (XML, Java)** – Android application that relies on user input to determine cost and nutrition for a Chipotle order using local prices/tax rates.

LANGUAGES AND TECHNOLOGIES

- Java*, Python*, C*, C++^, Ruby on Rails^
- Git*, Eclipse*, IntelliJ*, GNU/Linux (Debian and RPM)*, Wireshark^
